Creating a Project from HAAG Template
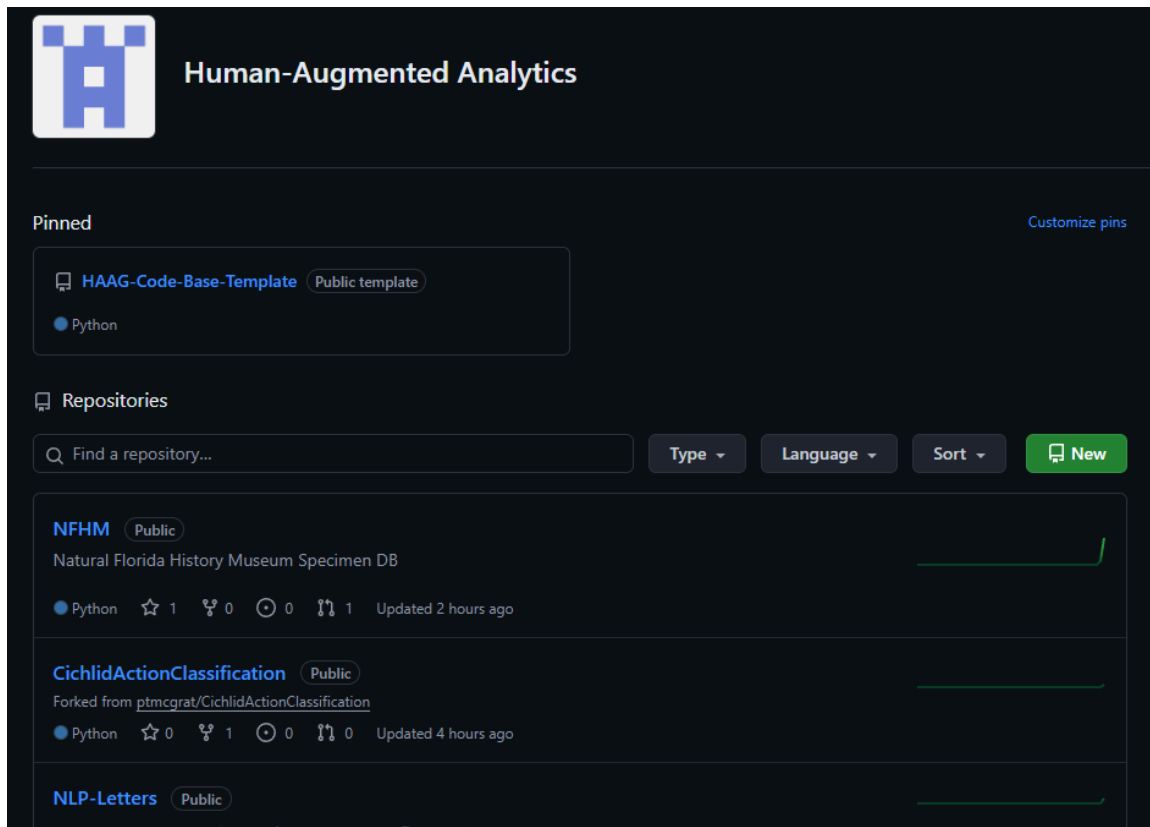

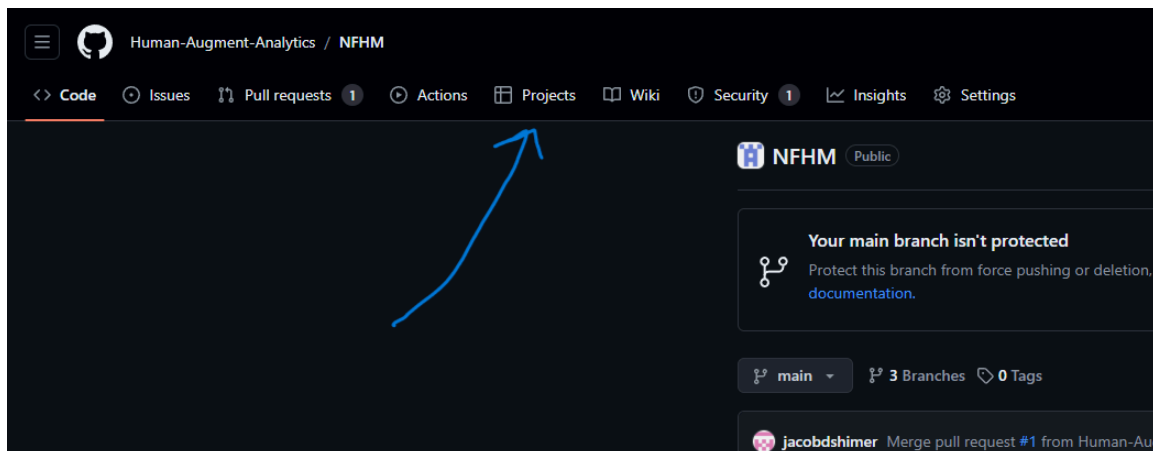

1) From the organization home page, select your repository.

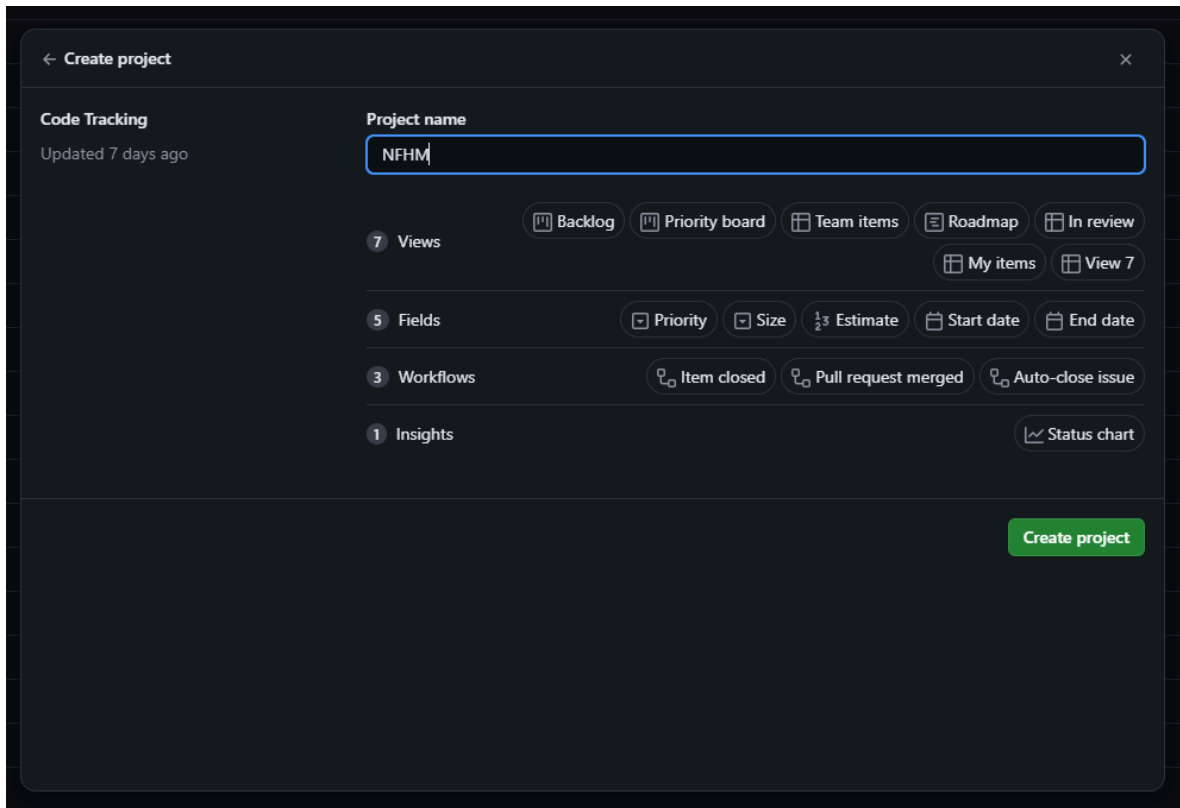

2) Next, go to the projects tab.

3) Select "New project."

4) Select the "Code Tracking" template.

5) Type your project name. In this case, we will use the name of the repository. Click "Create project."

6) GitHub projects will open. You will see sections already created from the template for tracking code.
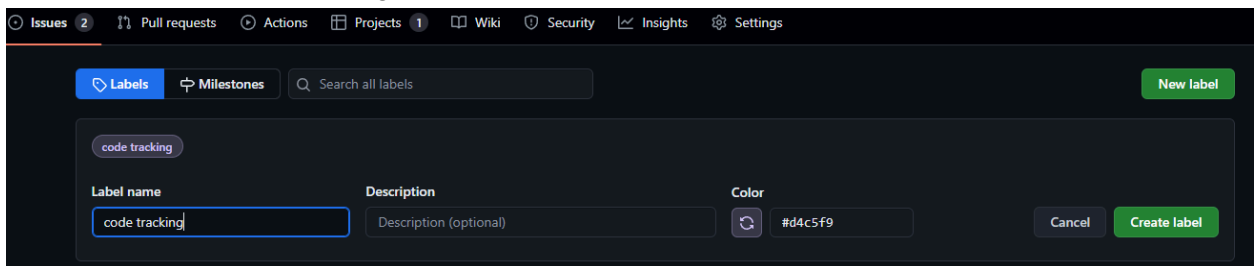

7) Go back to the repository's issues tab. Click "Labels."

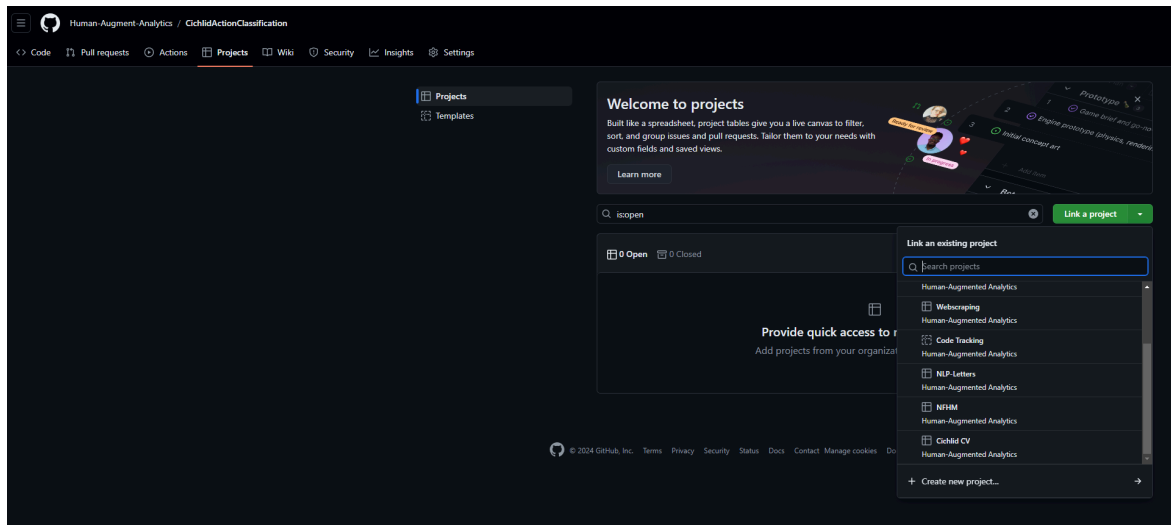

8) Click on "New label."

9) Name the label "code tracking" and click "Create label."

10) The label should appear in the list now.

11) Go to your project repository(s). Click on the projects tab. Click on "Link a project," and add your newly created project.

For instructions on adding items or issues to the project, see the other documentation files.
